Presentation Topic:

Development and application of new technologies through process intensification

Dr. Frank Gupton is a professor at Virginia Commonwealth University and holds joint appointments in the Departments of Chemistry and the Department of Chemical and Life Science Engineering. He is the Floyd D. Gottwald Chair of Pharmaceutical Engineering. He also serves as Department Chair of the Chemical and Life Science Engineering Department. His thirty-year industrial career centered on the development and commercialization of chemical processes for pharmaceutical applications. Dr. Gupton's research group is currently focused on the development of continuous processing technology to facilitate the discovery, development and commercialization of drug products. Prior to joining the faculty at Virginia Commonwealth University, Dr. Gupton served as the Executive Director of North American Process Development for Boehringer Ingelheim Pharmaceuticals and led the commercialization of the widely prescribed HIV drug nevirapine. Dr. Gupton received his Bachelor of Science degree in chemistry from the University of Richmond and graduate degrees in organic chemistry from Georgia Tech and Virginia Commonwealth University.

Dr. Gupton's research efforts have focused on streamlining pharmaceutical processes, particularly in the area of active ingredients, by employing the principles of process intensification which include the use of innovative chemistry, novel continuous manufacturing platforms, and new and more efficient catalysts for pharmaceutical applications. The research group's efforts are guided and driven based on both financial and economic impact that can be derived from this effort. Dr. Gupton is the recipient of the 2018 American Chemical Society Award for Affordable Green Chemistry, and in the same year, he received the Presidential Award for Green Chemistry. In 2019 he received the Peter J. Dunn Award for Green Chemistry and Engineering Impact in the Pharmaceutical Industry from the ACS Green Chemistry Institute Pharmaceutical Round Table. These awards were associated with Professor Gupton's work on the development of a highly efficient process to produce nevirapine, a first-line treatment in HIV therapy.

Tuesday, March 30th | 1:00 – 1:45PM

Zoom Meeting: 998 8566 6254 | Passcode: 560824
